Similar product : LD50rat > 5,000mg/kg (OECD 425), not harmful. 1)**Corrosivity/Irritation:****Skin:** This product is classified as nonirritant to the dermal tissue of rabbit. 1)**Eye:** This product is classified as nonirritant to the ocular tissue of rabbit. 1)**Sensitization:****Skin:** No data available**Repeated Dose Toxicity:** No data available**Carcinogenicity:** No data available
In 1996 the IARC reevaluated carbon black as a Group 2B carcinogen (possible human carcinogen). This classification is given to chemicals for which there is inadequate human evidence, but sufficient animal evidence on which to base an opinion of carcinogenicity. The classification is based upon the development of lung tumors in rats receiving chronic inhalation exposures to free carbon black at levels that induce particle overload of the lung. Studies performed in animal models other than rats did not show any association between carbon black and lung tumors. Moreover, a two-year cancer

bioassay using a typical toner product containing carbon black demonstrated no association between toner exposure and tumor development in rats. 2)

Mutagenicity: Ames test (Salmonella typhimurium , Escherichia coli) negative. 1)
