1 Introduction

The KIP Printer Status application is the ideal solution for providing centralized status updates and information to administrators and users over a local or wide area network. The app provides immediate access to view and manage the current status of all B&W and color KIP systems on the network via a single, convenient user interface. Using standard SNMP protocol, the KIP Printer Status application will automatically detect the available KIP printers and provide valuable information such as media levels, toner status and meter readings. Add up to 10 entries to access a KIP anywhere on your Wide Area Network.

KIP Printer Notifications

In conjunction with the KIP Printer Status application, each KIP is capable of sending detailed notifications. Users receive an email confirmation that their job has reached the print queue and has completed printing; ready for pickup. If a system interruption occurs such as out of toner or paper, a detailed email will immediately notify personnel. The System K controller automates the meter reading process by transmitting meter data via email on a weekly or monthly basis. The KIP Cost Center software can interpret the meter information and provide reports for print and scan production for both color and b&w documents.

KIP Printer Status / SNMP Key Features

SNMP Communication to KIP Printer | PC Based Windows 7/8 Application | 32 and 64 bit Operating Systems | Monitor Status of KIP Printers | Auto Detect KIP Printer (LAN) | Add up to 10 Printers by IP Address (LAN or WAN) | Visual Notification for Machine Status | View all KIP Printers on a Single Screen | Quick Access to Print Queue via PrintPro.net Link | Automated Meter Read
# 2 Installation and Setup

| 6.   | Once loaded the Application will open and detect all available KIP System K printers on the network. Each connection will display: | ![KIP-870-KTC](image2) • Printer Name and IP Address  
• Serial Number  
• Software Version  
• Firmware Version  
• Scan Version  
• Current Status  
• SN: 1359712  
• SW: 1.6.16.330.1  
• FW: K135FX05.03  
• SC: 5.01  
Ready Needs Attention |
| 7.   | Select a printer to see its status. Displays: | ![Printer Name and Status](image3) • Printer Name and Status  
• Media available  
• Toner available  
• Counters  
• Pending Jobs  
• PrintPro.net URL  
• Last updated date (for status) |
3 Functionality of KIP Printer Status

The Following section describes the functionality of the KIP Printer Status Application, its sections and what the buttons do.
### Component | Function
--- | ---
1. Available Printers | Each connection will display:
- Printer Name and IP Address
- Serial Number
- Software Version
- Firmware Version
- Scan Version

The Printer Status application will search the network for available KIP printers and load these into the Available Printers list.

2. Selected Printer Status - Ready

Selecting any of the available printers on the left will then display their status on the right. Available Information:
- Printer Ready
- Media currently loaded in printer
- Media remaining (25% increments)
- Toner remaining (25% increments)
- Counters
- Pending Jobs
- URL (launches KIP PrintPro.net)
- Last Updated time
### Component: Printer Status – Sleep and Communication

<table>
<thead>

| 3.        | Shows that the 7170K has Deck 1 open.  
|           | Shows that the 7970K has Deck 1 open. |

Real time message will be displayed on the main screen. Simply select a printer from the available printers list on the left. That printer's status will then be displayed:

1. Shows that the 7170K has Deck 1 open.
2. Shows that the 7970K has Deck 1 open.

### Component: Configuration

The Setting Icon will launch the settings screen. There are many features within the Setting section that will be explained here:
## Component Function

### 5. Settings – General Options

<table>
<thead>
<tr>
<th>General Options</th>
<th>Define Additional Printers</th>
</tr>
</thead>
<tbody>
<tr>
<td>Auto discover on Start</td>
<td>IP Address:</td>
</tr>
<tr>
<td>Only Display IPv4 Printers</td>
<td>-none-</td>
</tr>
<tr>
<td>Use Wake-on-LAN (WoL)</td>
<td>-none-</td>
</tr>
<tr>
<td>Media Display Units</td>
<td>-none-</td>
</tr>
<tr>
<td>Refresh Interval</td>
<td>-none-</td>
</tr>
<tr>
<td>SNMP Community:</td>
<td>-none-</td>
</tr>
</tbody>
</table>

**Configuration**

General options has the following setting in it:

- **Auto discover on Start** – When the application is opened it will automatically look at the network and find any available KIP printers.

- **Only Display IPv4 Printers** – If IPv6 IP Addresses are being used the application can be made to not display them.

- **Use Wake-on-LAN (WoL)** – If Selected this will send a wake up command to the KIP Printers in case they are in a sleep mode.

- **Media Display Units** – Sets the units to Imperial or Metric.

- **Refresh Interval** – Sets the amount of time between refresh intervals.

- **SNMP Community** - The user may enter a new community string here instead of the default "public" (see Note below).

**Note:** The **SNMP Read-Only Community String** is like a password. It is sent along with each **SNMP Get-Request** and allows (or denies) access to device. The KIP Printer is shipped with a default password of "public". (This is the so-called "default public community string"). Starting with KIP version 1.6 the community string can be set to something other than "public".
### Component | Function
--- | ---
6. Settings - Define Additional Printers | ![Configuration](image)

In the case of a printer being on the Local area Network (LAN) but having a different IP/Subnet address the discovery function will not see these printers. In these instances, the KIP Printer can be added to the KIP Printer Status manually.

This screen will allow the user to manually enter the IP Address of the printer they would like to connect with (up to 10). Also in the manual entry screen is the ability to name the printer a specific name that is recognizable.
## 4 Using KIP Printer Status

The Following section describes the Uninstallation of the KIP System K Windows Driver® Please follow the Step-by-step procedure for correct installation
